IAM Users and Roles Lab

○ Objective: To understand AWS Identity and Access Management (IAM) by creating and managing users, groups, and roles.
○ Approach: Students will create new IAM users, assign them to groups, and apply policies to manage permissions. The lab will also involve creating roles for AWS services and understanding the use of IAM roles for cross-service access.
○ Goal: Students will learn about user and permission management in AWS, the importance of roles for security and best practices for IAM.

Start by creating a user.
