

EC2 steps -

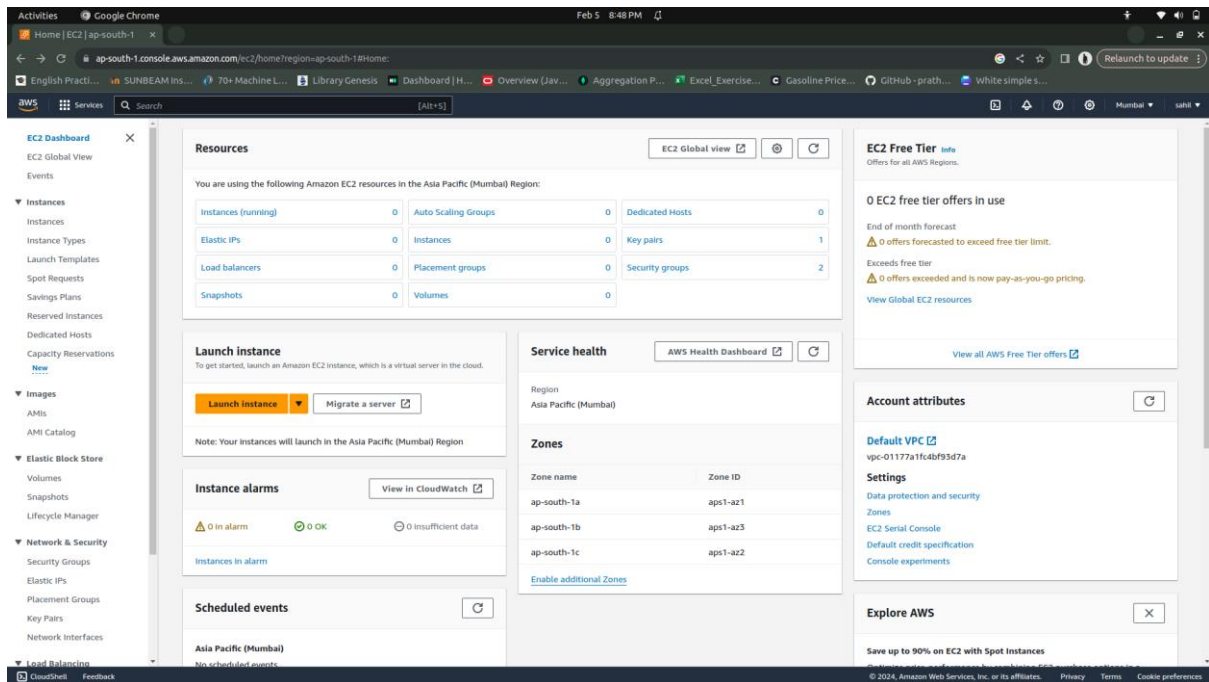

1. Go to AWS console

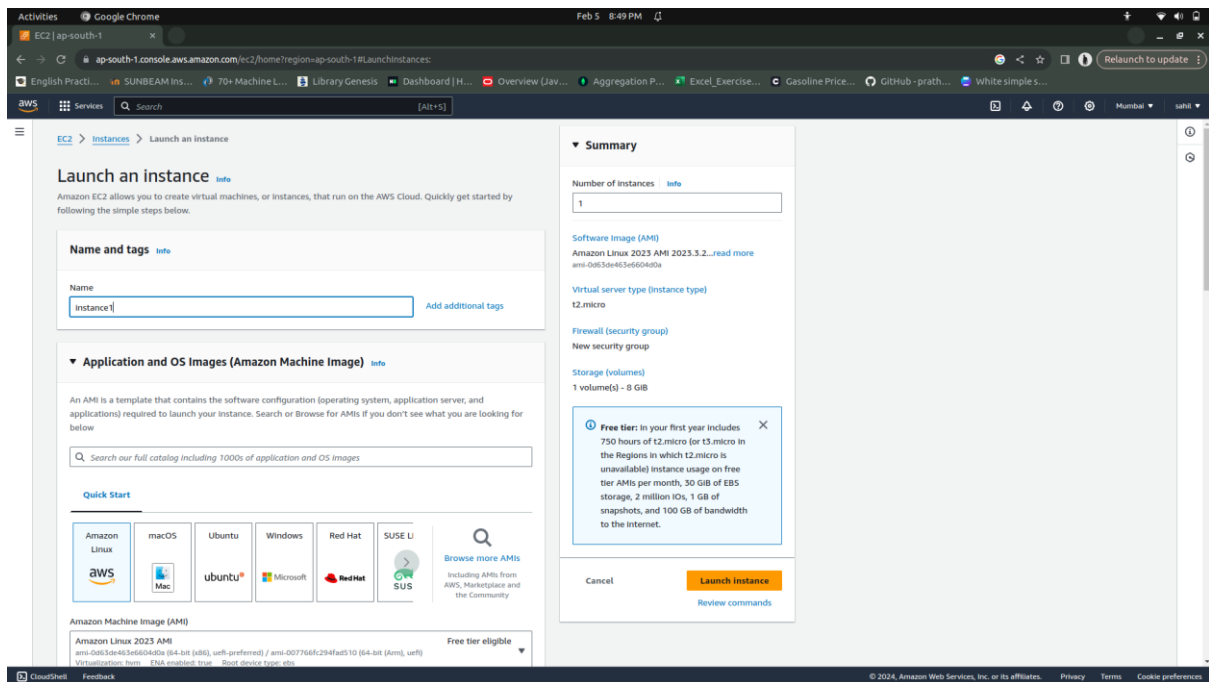

2. Search for EC2 instance service

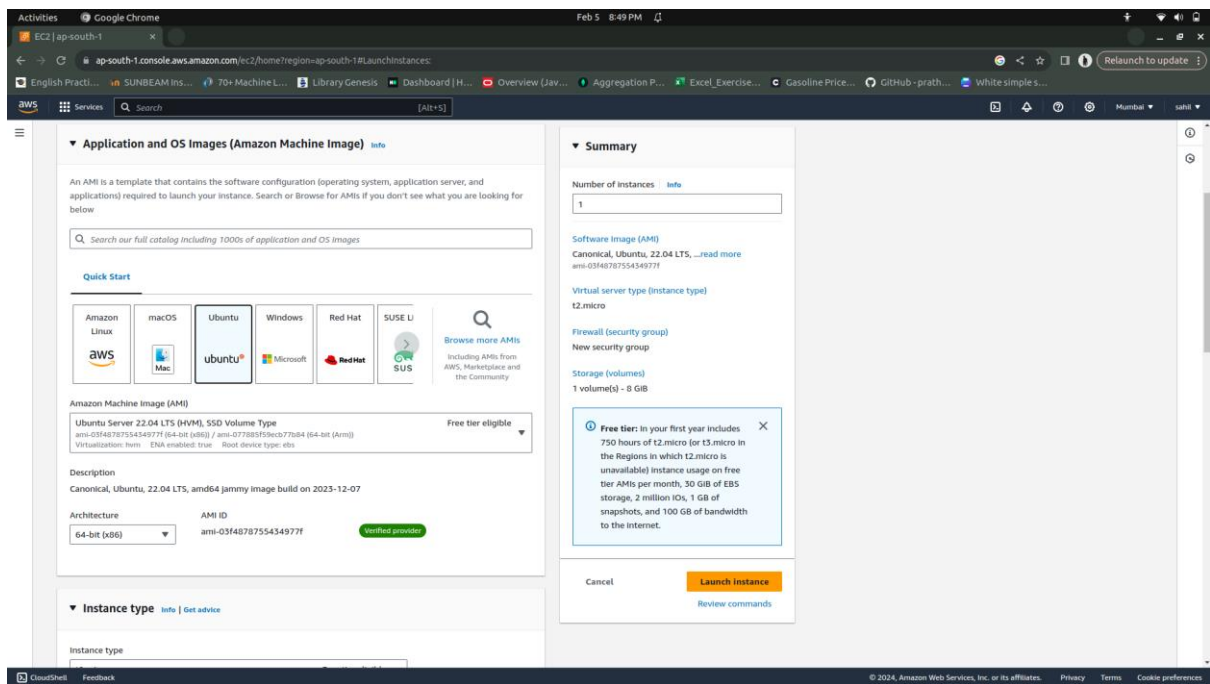

3. Select launch instance

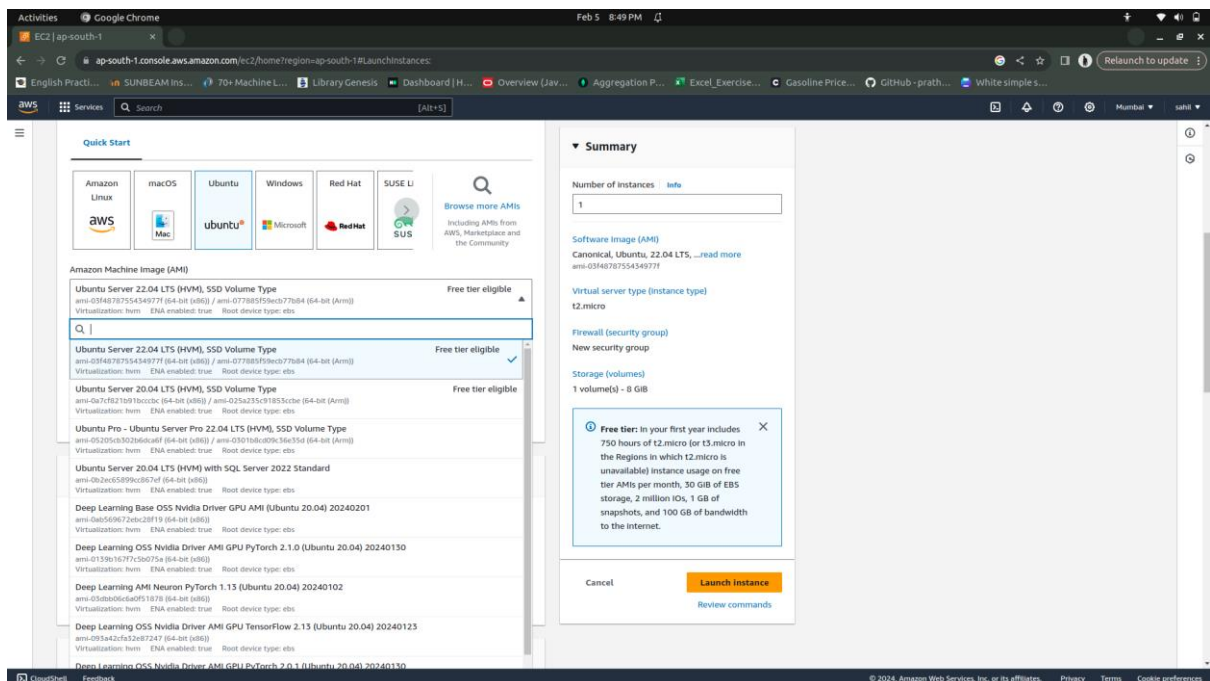

4. Give name to an instance

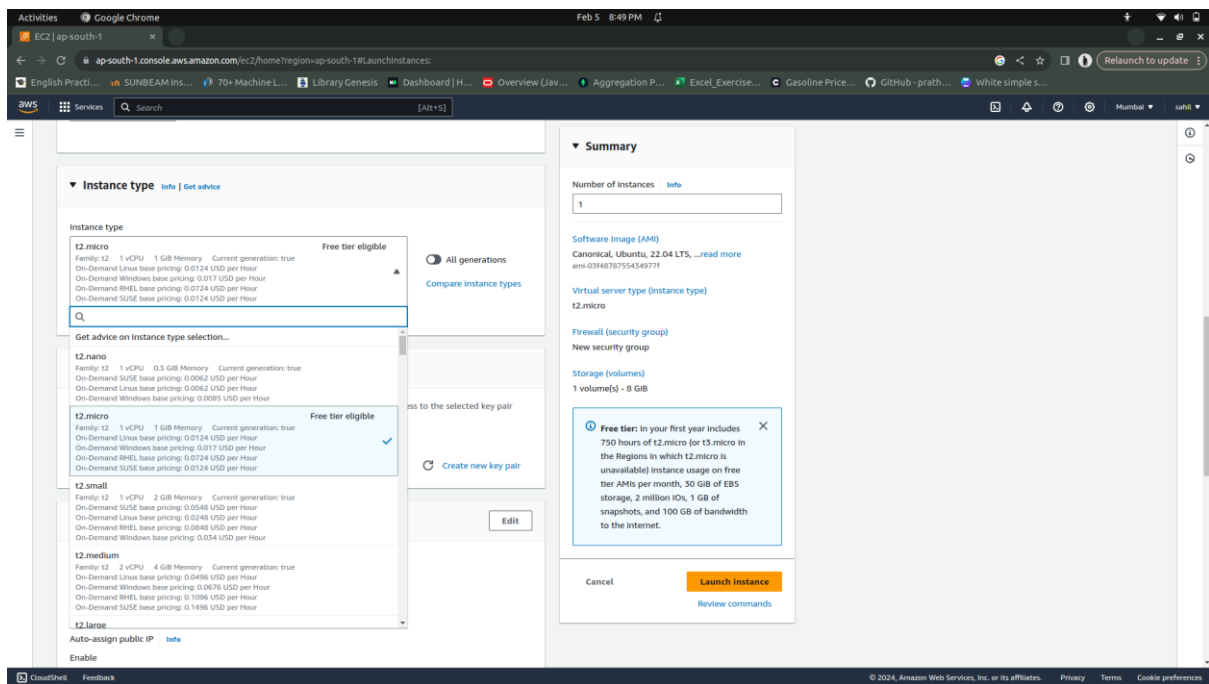

5. Select Operating system

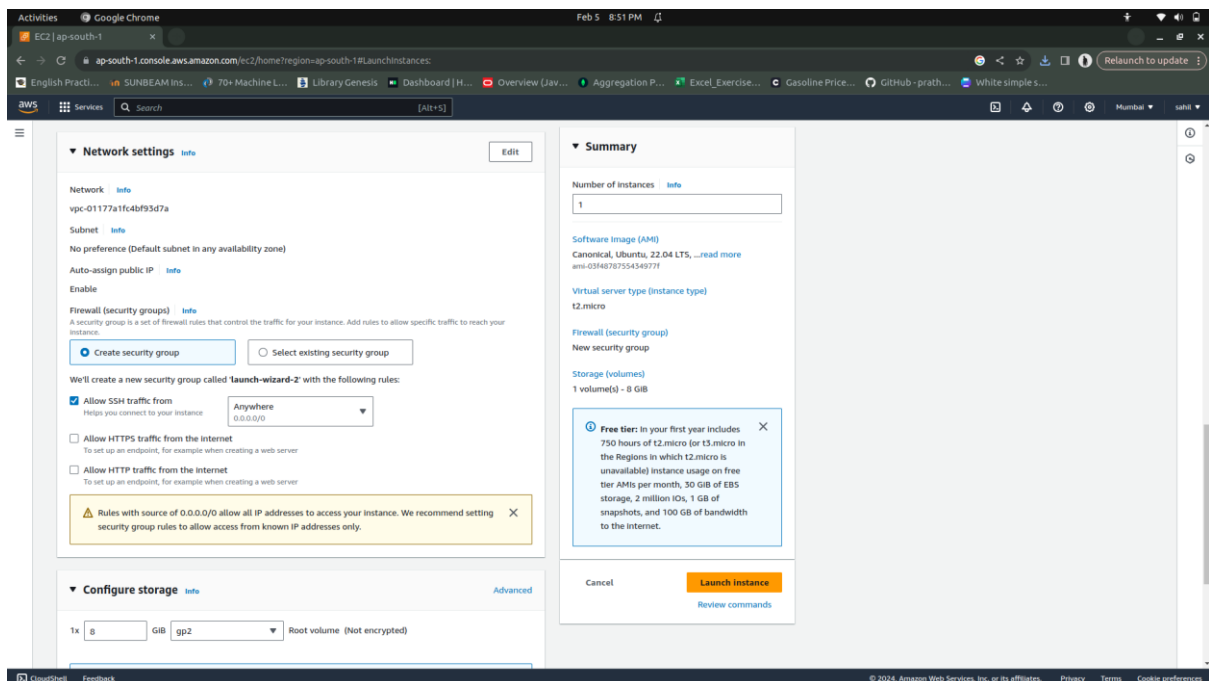

6. Select AMI (Amazon machine image) (we take free one)

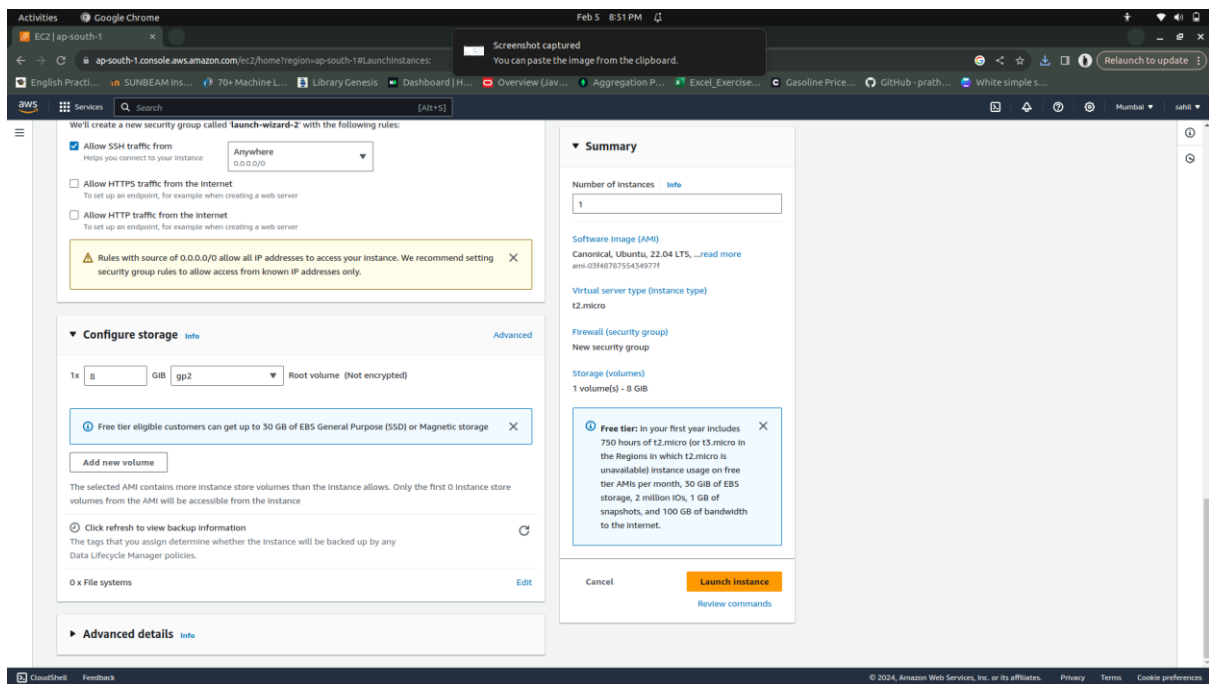

7. Select instance type (we take free one)

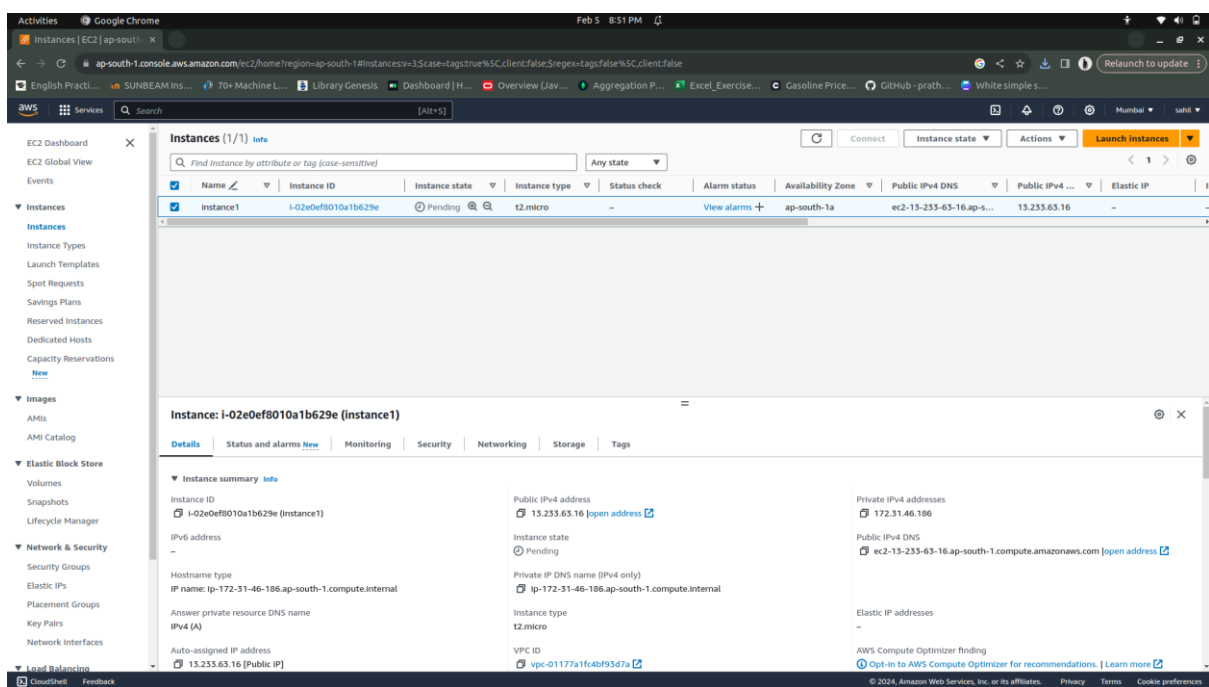

8. Select network setting as default (Select as per your requirement)

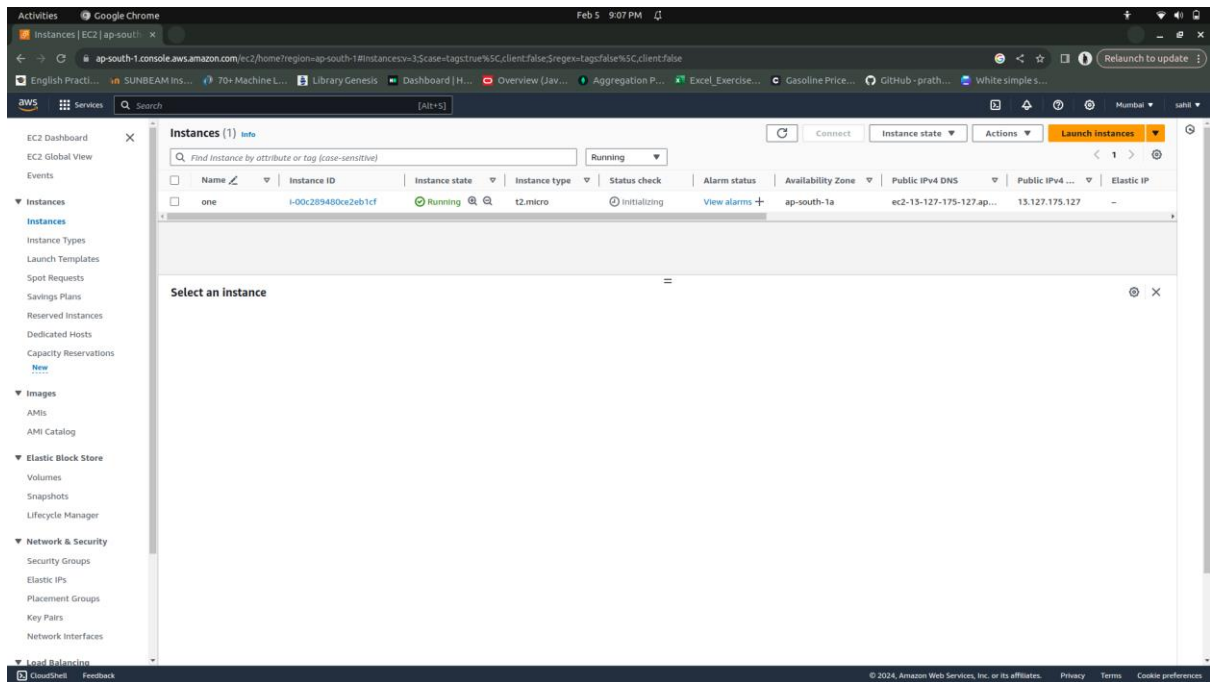

9. Select configuration storage as default (Select as per your requirement) and click on launch instance button.

10. Then we see all instances (It takes time to come in running state from pending state)

11. Finally our instance is in running state (so we use it for further purpose)

12. Instance summary
