We start by creating a new VPC.

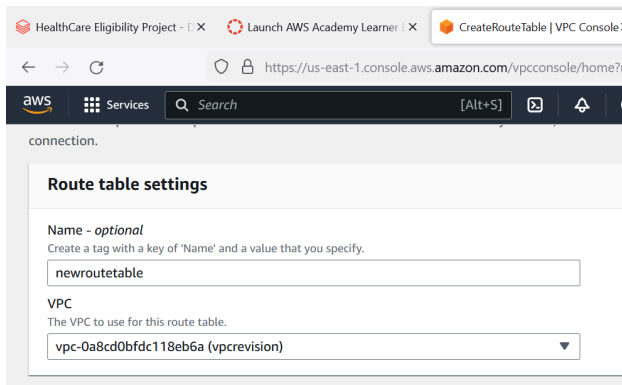

We can see a new VPC is created.

We create two subnets and attach a VPC that we recently created.

Then, we create an Internet Gateway and attach our VPC to it.

Then, we create a route table, attach a VPC to it and associate subnet.

Then, we create an EC2 instance and select Windows as AMI.

New instance is created.

Then, we download a remote desktop file. Then, we copy the password and connect to remote desktop connection.
